Summary

The projects ultimate goal is to create a professional portfolio that will promote my attributes to employers. The portfolio is themed around games programming with some design elements. This is due to the primary field of expertise that I'll be applying for requiring these skills. I shall include things like examples of projects I've worked on, with writing explaining what skills it shows I have. The website will also be well designed and easy to navigate.

The gantt chart is a representation of the process's involved in the lead up and creation of the portolio website. This includes learning how to use microsoft project in the first place, and all the steps needed to create the portolio, with all the research that goes with it.

I used a combination of days and hours as I think it would help me better plan out how I was going to do things. The days show how long I have to complete somthing, and the amount of hours is how long I plan to work on somthing over the course of those days.
